When PET cans contain hot drinks above 60°C, there is a risk of shrinking the can and releasing harmful substances.

> Fermentation Cap

Sample Photo

- DIAMETER : 105(mm)

All lids do not contain transparent lids

A filter is attached to the lid hole, so it can be used in foods that are fermented and discharged from gas.

(ex: kimchi, gochujang, salted fish, yogurt, etc.)

※ caution ※

Do not turn it over after sealing.
Although the filter has a basic waterproof function, if exposed to water for a long period of time, the filter may become wet and leak toward the filter.

> PP Transparent cap

Sample Photo

- DIAMETER : 105(mm)

It is a type of food container covered with a PP transparent lid.

You can use it after sealing.

You have to use it after sealing so that the contents don't leak.

※ caution ※

The PP transparent lid is a lid that closes rather than turning to close.

Thank you.
